Professional Experience

2026/03 – **Volunteer**, *Robotika Pécs Foundation*, Pécs

- Present - Maintenance of robotics hardware, wiring, and assembly of complex systems.
- Software configuration, testing, and troubleshooting of control scripts.
- Assisting at professional events and mentoring students in the fundamentals of programming and robotics.

2026/03 – **IT Specialist**, *Charter Informatika Kft.*, Pécs

- 2026/04 - Hardware maintenance and network infrastructure deployment.
- Installation and configuration of servers and desktop computers in corporate environments.
- Provided support for various web and software development tasks.

2025/01 – **Web Application Developer**, *Exaline Kft.*, Budapest

- 2025/05 Developed a custom SEO auditing web application. The project's objective was the automated analysis and comparison of competitor webshops.
- **Backend:** Implemented an automated web scraper in Python to extract competitor data, and built the core database and logic using Django.
- **Frontend:** Designed and developed an interactive, responsive user interface using the React framework.
- Full-stack involvement in the design, development, and testing phases of the application lifecycle.

Highlighted Project

- 2025 – **KitsuKana**, *Full-Stack Japanese Learning Web Application*
Present *Live URL: kitsukana.vercel.app*
End-to-end product development leveraging an AI-assisted engineering workflow.
- **Core Stack:** Architected a highly performant application using **Next.js (App Router)** and **React 18**, enforced by strict **TypeScript** typing for robust development.
 - **Data & Auth:** Integrated **Supabase** (PostgreSQL BaaS) for scalable data management and **Clerk** for secure, modern user authentication.
 - **Custom UI/UX:** Designed and implemented a custom, CSS variable-based design system (glassmorphism aesthetic) entirely from scratch, avoiding heavy UI libraries like Tailwind.
 - **Infrastructure:** Deployed via **Vercel** CI/CD pipelines and integrated **PostHog** for GDPR-compliant, event-based product telemetry.
 - **Integrations:** Built automated issue-tracking pipelines using the GitHub REST API and handled monetization via Stripe/Ko-fi.

Education

- 2023/09 – **BSc in Computer Science**, *University of Pécs (PTE-TTK)*,
2026/06 Pécs
Software Engineering Specialization
Thesis: *The Hausdorff Metric and Fractals*

Technical Skills

- | | |
|----------------|---|
| Frontend | HTML, CSS (Custom Design Systems), JavaScript, TypeScript , Next.js , React, Bootstrap |
| Backend & Data | Node.js , Supabase (PostgreSQL) , Clerk , Python (Django, Flask, NumPy, Pandas, SciPy) |
| Programming | TypeScript , C#, Java, C++, Dart (Flutter) |
| Infrastructure | Vercel (CI/CD) , PostHog (Analytics) , Linux (Debian, Arch), Networking basics |
| Other | AI-driven product engineering (LLMs), Robotics software configuration |

Languages

- | | |
|-----------|---|
| Hungarian | Native proficiency |
| English | C1 (Advanced) – Fluent in speaking, advanced professional reading and writing |
